

DESET

DESET OOD was established in 2001. The company's activities includes design of buildings and equipment, interior and exterior design, urban development projects, expert counselling for local and foreign persons about investment in construction projects.

The company's priority is the ultimate project efficiency, respecting client's requirements in compliance with the legal framework, aimed at achieving optimal dynamics, economy and spatial impact.

DESET targets are the architectural projects for public buildings. We create conceptions for sophisticated space structures. We apply innovative technology in morphological space. We prepare a complete set of technical documentation and drawings for all engineering elements. Our services range from urban planning through detailed design construction supervision on behalf of the investor.

Tensile, Tensile membrane construction, Sofia, area: 60 sq.m

I/O ARCHITECTS

I/O architects started as a long-distance collaboration between Sofia and Tokyo in 2004 when Viara Jeliatzkova and Georgi Katov developed their first project.

Our work manifests an ambition to combine local experience with an external perspective. The design process is marked by multidirectional experimentation and sensitivity to the specific context of local landscape, city and society. The result is intentionally ambiguous and incorporates both admiration and an ironic awareness of the existing inconsistencies. Formal expression is adequately controlled, avoiding the negatives of transition aesthetics.
